

## COMPASSIONATE CARE - NO MATTER WHAT CHALLENGES YOUR PET IS FACING.

Our internal medicine specialists excel in diagnosing and treating a variety of complex conditions that involve multiple body systems. An internist can diagnose many types of infectious diseases and immune system disorders, treating complicated diseases that affect the gastrointestinal tract, urinary system, hormone systems, blood, lungs, liver and pancreas.

When you can tell something's wrong with your pet, but the underlying cause isn't clear, your family veterinarian may refer you to one of our internists for further diagnostics. The internist will begin diagnosing and treating the patient, sharing test results and lab work with your family veterinarian and any other required specialists to create an appropriate treatment plan for your pet.

# PROCEDURES AVAILABLE

Our internists use on-site ultrasound capabilities to get a clear, real-time view of your pet's organs and systems at work, allowing them to make an accurate diagnosis and develop an effective treatment approach for an improved quality of life.

- ▼ Ultrasound Examination
- ▼ Upper Gastrointestinal (GI) Endoscopy
- ▼ Lower GI Endoscopy (Colonoscopy)
- ▼ Endocrine Tests
- ▼ Bronchoscopy
- ▼ Rhinoscopy
